You are invited to a session on

Cloud Computing in Government

by Paul Brebner and Jon Gray

Many organisations, such as government agencies with significant investments in legacy systems that deliver services to citizen and customers are now looking at Cloud Computing services to reduce CT needs. Cloud-based services may provide a cost effective alternative and obviate the need for costly capital expenditure on new data centres. However, cloud computing services are relatively new technology, and migration to cloud can be major business transformation activity for a large organisation.

How do you know which if any vendor has the right service for you? Which of your applications are suitable for the cloud, and which are not?
In this seminar we address these issues for Government.

NICTA

gov e cluster

When	**Wednesday 20 October 2010** 6pm drinks and networking 6.30pm - 7.30pm presentation
Where	Ground Floor Seminar Room Tower A, 7 London Circuit Canberra ACT 2601
Cost	Free for first time guests and members. $20 for repeat guests and $5 for students.

Paul Brebner and Jonathan Gray

Paul Brebner has over 25 years experience in diverse areas such as enterprise architectures and technologies, middleware, object orientation and Java, web and service orientation, distributed systems development, knowledge based systems, and software process improvement.

Paul is currently with the NICTA e-Government initiative and is leading NICTA's work on modelling large-scale, complex enterprise systems typically found in the government, health, and financial sectors.

Jon Gray has 20 years of computing experience in industry and academia both in Australia and the UK. Jon's research interests have encompassed parallel and distributed systems design, database technologies, software engineering methods and tools, organisational capability development, and business process improvement. Jon is currently leading an e-Government research initiative for National ICT Australia Limited (NICTA) in Canberra.
